

Markets Report

Tim Horger
Director, Market Operations
Members Committee
May 3, 2021

www.pjm.com | Public PJM⊚2021

- PJM Wholesale Cost for 2021 is \$52.28/MWh, up from full-year 2020 costs of \$43.41/MWh. (Slides 5 & 6)
- Slides pertaining to weather conditions, in addition to slides showing average fuel prices, generation on-line fuel mixes, and System Marginal Prices have been combined into a **Market Conditions** section. (Slides 8- 19)
- In March, temperatures were mild for most of the month. Thus, the sum of Heating and Cooling Degree Days was below its historic average. (Slides 8-10)
- Energy use was also below its historic average for March. (Slides 8-10)

- In March, uplift exceeded \$800,000 on three days March 6th, 8th and 25th.(Slides 24 & 25)
- Load-weighted average LMP for 2021 is \$30.84/MWh: (Slides 31 & 32)
 - March 2021 was \$26.30/MWh, which is higher than March 2020 (\$17.90/MWh) and lower than March 2019 (\$29.90/MWh).
- There were three 5-minute intervals that experienced shortage pricing in March. (Slide 31 & 32)
- FTR revenue adequacy for the month of March is 90% and the 2020-2021 Planning Year is currently funded at 98%. (Slides 47-50)
- Congestion remains low, however, higher than values observed last March. (Slide 48)
- Regulation and Synchronized Reserve market costs have generally tracked with energy prices over time. (Slides 59-61)

- The weather parameter shown in the following slide is a monthly sum of daily Heating Degree Days (HDD) and Cooling Degree Days (CDD).
- Degree days represent a deviation from a baseline temperature, in this case 60 degrees for HDD and 65 degrees for CDD. As temperatures get more extreme, colder or hotter, either HDDs or CDDs, respectively, will increase.
- Typically, winter months will only record HDDs, while summer months will only record CDDs. Shoulder months may have both HDDs and CDDs.
- Degree Days are calculated using a daily load weighting that weights values from stations in each TO zone according to the zonal contribution to the RTO peak on that day.
- Average values use data from 1998 to the most recent complete year, in this case, 2020.
 Averages include load data for all of TO zones in the current RTO footprint.

Daily Difference Between Day-Ahead and Real-Time System Marginal Prices

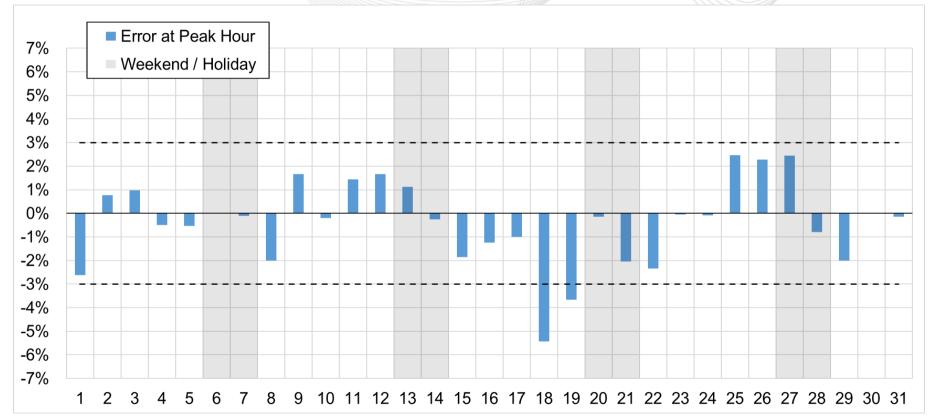

Positive values represent days when the DA daily average price was higher than RT. Negative values represent days when the DA price was lower.

Load Forecast Error – March Daily Peaks, 10:00 Forecast

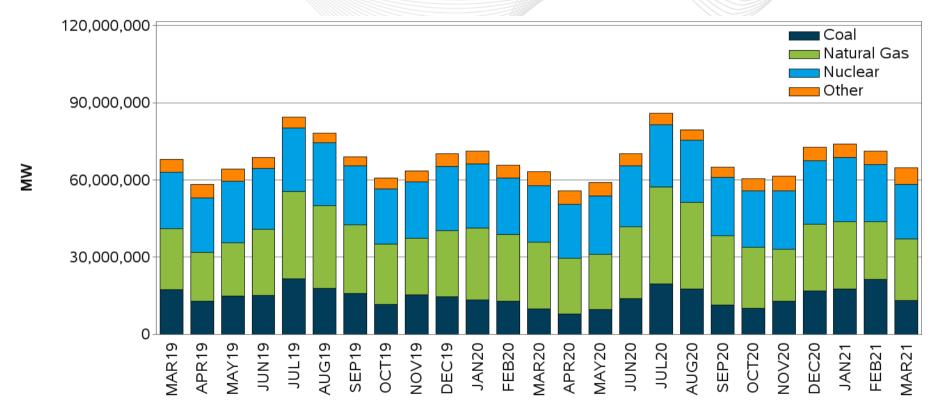

PJM prepares a day-ahead load forecast at 10:00 am for use by our members.

This forecast is not used to clear the day-ahead market and is not utilized for the reliability tools that run subsequent to the day-ahead market.

 Load forecast accuracy was generally high in March, as weather conditions in PJM turned mild. On March 18 and 19, stormy weather conditions and falling temperatures caused load forecast models to under-forecast the peaks.

Monthly Uplift

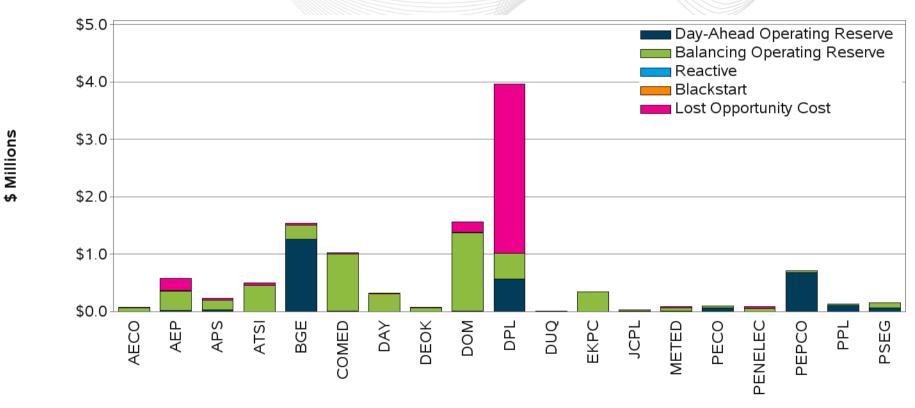

\$/MWh

Monthly Uplift - \$/MWh Load

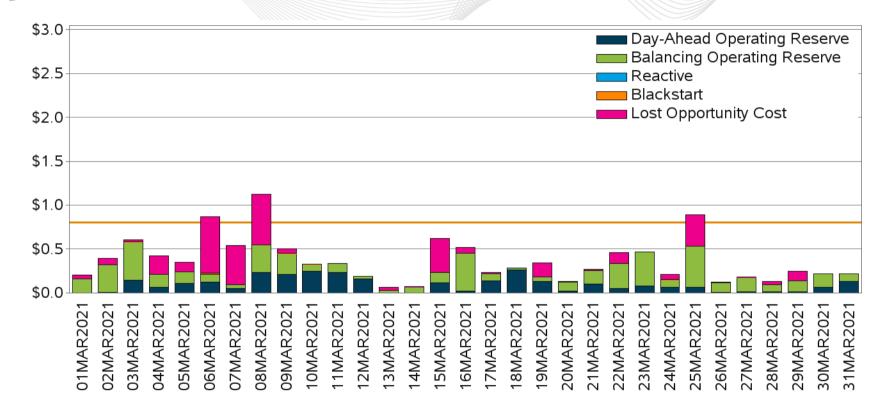

Zonal Uplift - March

Daily Uplift - March

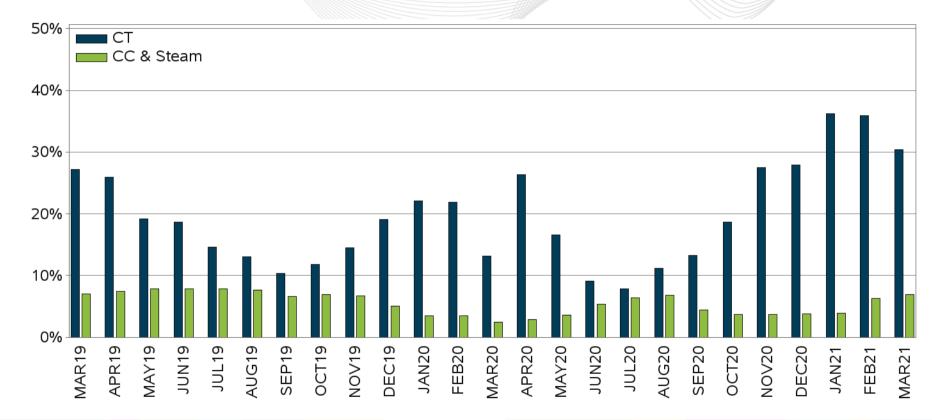

In March, uplift exceeded \$800,000 on three days – March 6th, 8th and 25th. Contributing factors to uplift were:

Uplift on all three days was a result of localized congestion in the DPL zone.

More information on Uplift can be found on PJM's website at Drivers of Uplift

Percent of Total CT, CC and Steam Hours with LMP < Offer

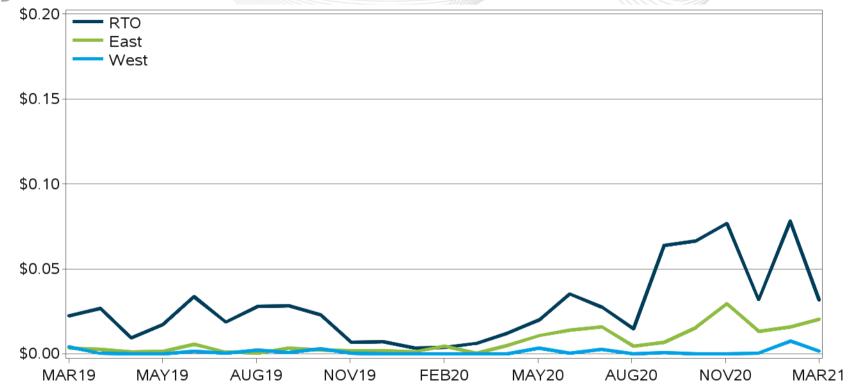

- Beginning in December 2008, the daily Balancing Operating Reserves (BOR) rate
 was replaced with six different BOR rates: RTO BOR for Reliability Rate, RTO BOR
 for Deviations Rate, East BOR for Reliability Rate, East BOR for Deviations Rate,
 West BOR for Reliability Rate, West BOR for Deviations Rate.
- Reliability rates are charged to all real-time load and exports, whereas deviation rates, as before, are charged only to real-time deviations. RTO rates are charged to the whole footprint, whereas East and West rate adders are charged based on location.

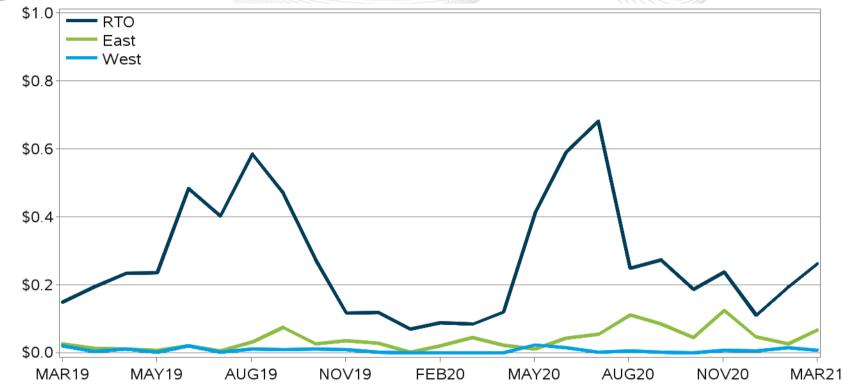

Reliability Balancing Operating Reserve Rates

Energy Market LMP Summary

www.pjm.com | Public 30 PJM©2021

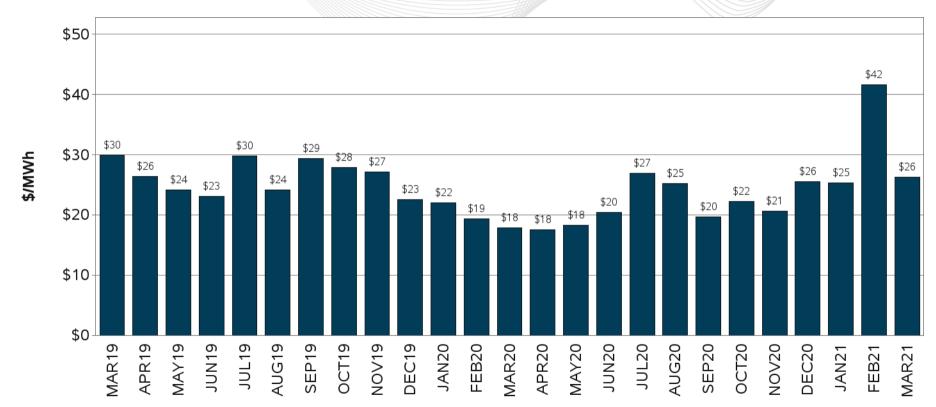

- A 5-minute shortage pricing interval occurred on March 17th between 10:10 and 10:15.
- PJM experienced the following reserve penalty factors:
 - 1st step penalty for Primary Reserve deficiencies in the RTO and MAD
 - 2nd step penalty for Synchronized Reserve deficiencies in the RTO and MAD
- System Marginal Price (SMP) for the 5-minute interval was \$3,653.98, and the hourly integrated SMP was \$343.70.

- Two 5-minute shortage pricing intervals occurred on March 22nd between 19:45 and 19:55.
- PJM experienced the following reserve penalty factors:
 - 19:45-19:50 interval
 - 2nd step penalty for Primary Reserve deficiencies in the RTO and MAD
 - 2nd step penalty for Synchronized Reserve deficiencies in the RTO and MAD
 - 19:50-19:55 interval
 - 1st step penalty for Primary Reserve deficiencies in the RTO and MAD
 - 2nd step penalty for Synchronized Reserve deficiencies in the RTO and MAD
- SMPs for the 5-minute intervals were \$3,688.68 and \$2,431.68, respectively and the hourly integrated SMP was \$542.37.

Virtual Activity Summary

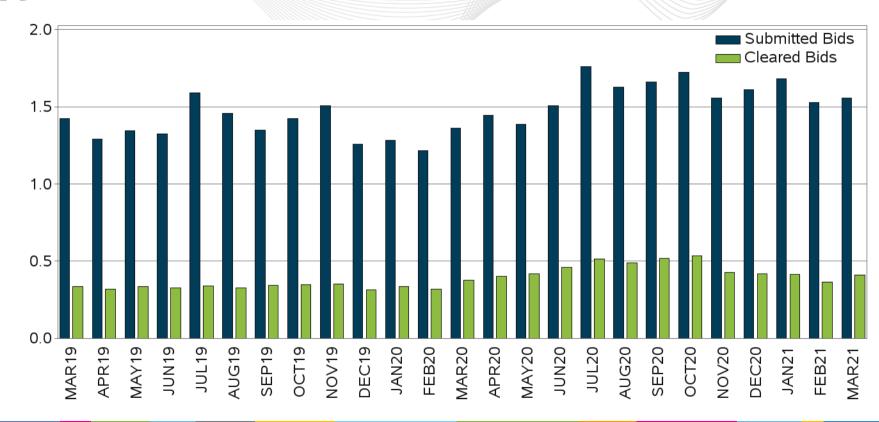

www.pjm.com | Public 40 PJM©2021

- The following six charts depict trends in submitted and cleared virtual and up-to-congestion transactions, in terms of number and volume, into the PJM Energy Market. The first two of these charts show the submitted and cleared increment and decrement bids (virtual transactions or virtuals) and they are the same as what was previously being presented in this report. The two charts after them display the trends in submitted and cleared up-to-congestion transactions into the PJM Energy Market. The last two of these six charts combine the virtual and up-to-congestion transactions and show the sum of these two categories.
- To clarify what a bid or transaction is, please consider the following example: An offer (increment, decrement or up-to-congestion) of 10 MW, valid for eight hours for a given day, is captured in the charts as eight submitted bids/transactions and 80 submitted MWh. If this offer fully clears for three of the hours it was submitted for, it shows in the charts as three cleared bids/transactions and 30 cleared MWh.
