

Clean Attribute Procurement Senior Task Force Monthly Progress Report

October 11, 2023

1. Procurement of Clean Resource Attributes

Issue Status

Solution package voting complete; proposing to sunset

Target Completion

June 2023

Progress Update

The CAPSTF went on hiatus from May to August in order to make space for the CIFP-RA process to complete. The group met again on September 22, 2023. In the meeting, OPSI announced that their Competitive Policy Achievement Working Group had completed its work and that a new working group consisting of interested state commission staff is working to pursue clean energy attribute market structures. The Forward Energy Attribute Market Working Group, led by Ryann Reagan of the NJ BPU, will work from now until December to complete their work. Interested stakeholders should email Ryann (Ryann.Reagan@bpu.nj.gov) to get involved.

Due to the new Forward Energy Attribute Market Working Group, and a recognition that the proposal being worked on is likely not FERC jurisdictional, the CAPSTF is proposing to sunset.
