

Pseudo-Tie End-of-Month Reading Meter Correction

Problem / Opportunity Statement

- There is no mechanism for meter correction at the end of the month for generators connected to PJM via pseudo-ties.
- There is such a mechanism for generators connected directly to the PJM system and for tie lines.
- Addressing this oversight will afford putting pseudo-ties on an equal basis as other generators.
- Pseudo-ties are fairly new in PJM and there has not been a known occurring instance to date.
- There is a potential for generators connected via pseudo-ties to be incorrectly compensated if the issue is not addressed.
