

PJM Manual Metering Requirements

Metering Requirements in Manual 01 need re-examination and revision.

Issue Source

PJM and PJM Members impacted by Manual metering requirements.

Stakeholder Group Assignment

A new Task Force would be created; the Metering and Metering Requirements Task Force.

Key Work Activities

Work activities will include: Review existing PJM Manual requirements, surveying existing metering infrastructure and common practices particularly among Transmission Owners, identify gaps between intended requirements and metering practices, and develop reasoned and effective clarifications and edits to the Manual text that meets operational and market needs in the most efficient way.

Expected Deliverables

The main deliverable is a revision of Manual 01 that is endorsed by SMEs and representatives of the major stakeholders impacted by the requirements. The revision will be broadly understood and approved, ensuring acceptance and implementation as the revised Manual becomes authoritative.

Expected Overall Duration of Work

The duration of the work is expected to take between three and six dedicated sessions, where a session is a monthly webex/in-person meeting hosted at PJM.

Decision-Making Method

The ultimate product will be decided by consensus, Tier 1, where the final product is the complete revision as worked on by the Task Force.
