

# Performance Score

Ilyana Dropkin, Senior Engineer  
Performance Compliance  
RMDSTF  
March 21, 2023

- Change from 3 components of Performance score (1/3 Accuracy, 1/3 Delay and 1/3 Precision) to Precision Only score that follows Status Quo calculations.

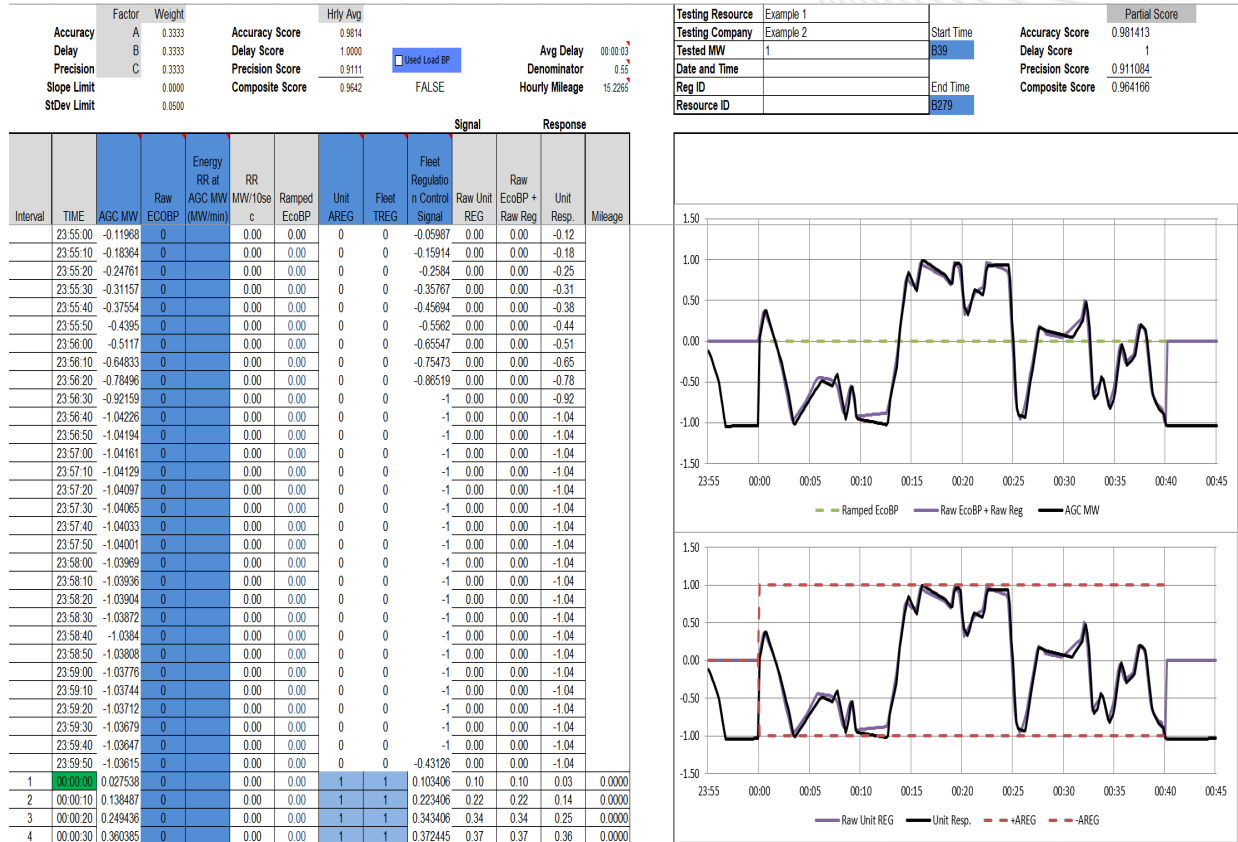

$$Error = Avg\ of\ Abs\ \left| \frac{Response - Regulation\ Signal}{Hourly\ Average\ Regulation\ Signal} \right|$$

$$Precision\ Score = 1 - \frac{1}{n} \sum Abs(Error)$$

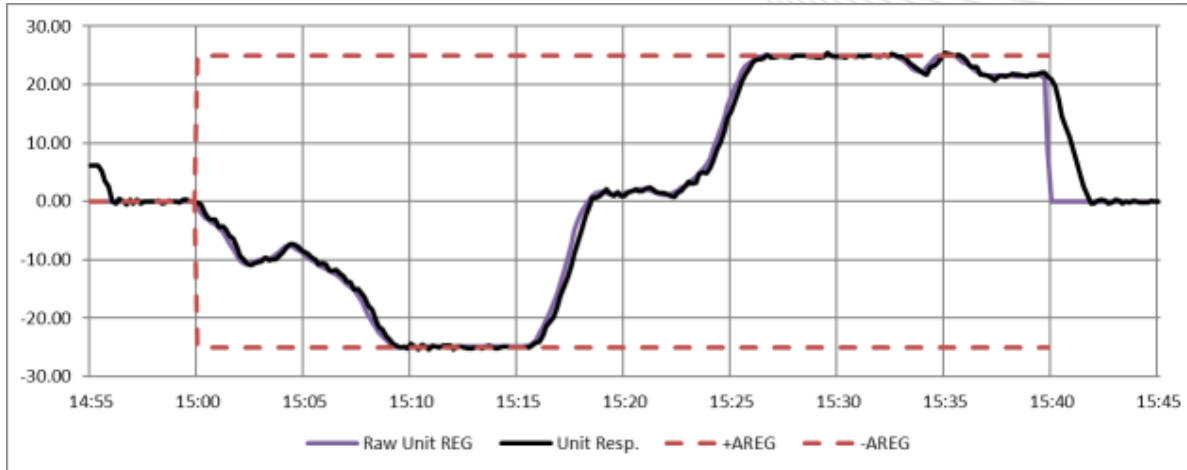

- Keep disqualification from Regulation Market threshold at below 40%
  - A rolling average actual hourly performance score for the last 100 hours a resource has operated

# Performance Scoring Template

- PJM Website > Markets and Operations > Ancillary Services > Regulation Self-Test Signals > 40-Minute Performance Score Template – Updated to Reflect August MRC Changes.xlsm

<b>Performance</b>	<b>0.406</b>

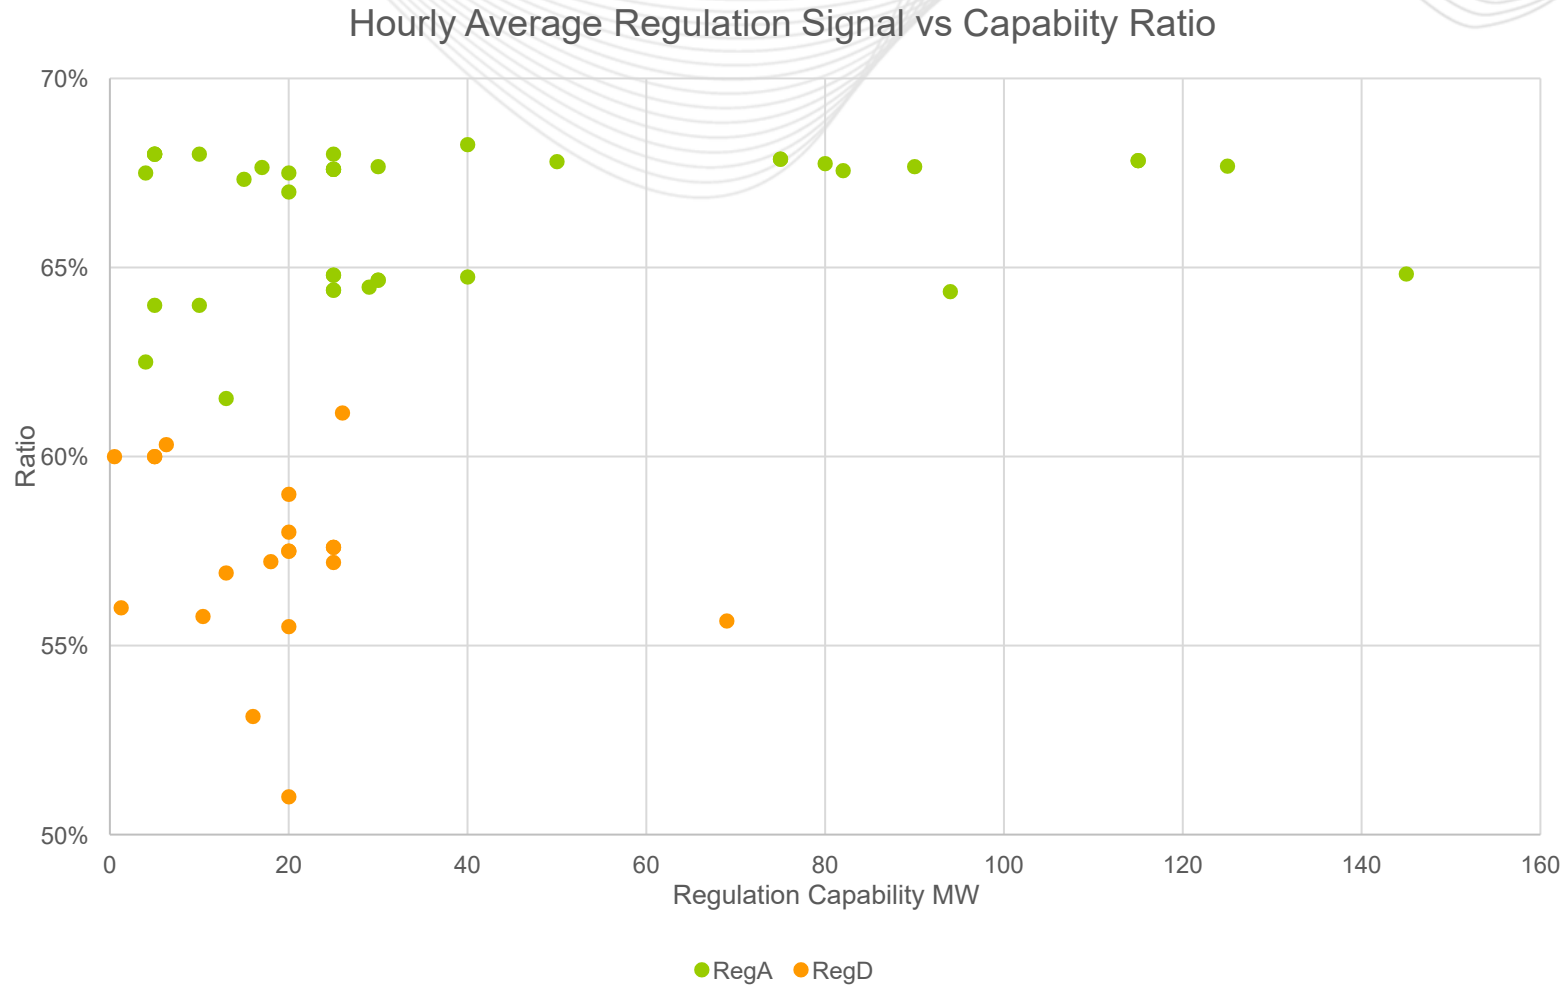

## Precision Calculation:

$$\text{Error} = \text{Avg of Abs} \left| \frac{\text{Response} - \text{Regulation Signal}}{\text{Hourly Average Regulation Signal}} \right|$$

$$\text{Precision Score} = 1 - \frac{1}{n} \sum \text{Abs}(\text{Error})$$

- A smaller Hourly Average Regulation Signal in the denominator yields a larger error, which in turn yields a lower Precision Score
- RegD resources tend to have a lower Hourly Average Regulation Signal when compared to their Regulation Capability than RegA resources because RegD crosses zero more often than RegA.

# Hourly Average Regulation Signal vs Capability MW

- Single Signal Design eliminates the concern with Reg D resources tendency to have a smaller Hourly Average Regulation Signal that yields to a lower Precision Score.
