

F2 Solution

General Information

Proposing entity name	CONFIDENTIAL INFORMATION
Does the entity who is submitting this proposal intend to be the Designated Entity for this proposed project?	CONFIDENTIAL INFORMATION
Company proposal ID	CONFIDENTIAL INFORMATION
PJM Proposal ID	622
Project title	F2 Solution
Project description	765 kV, 500 kV, and 230 kV greenfield substations and greenfield transmission lines solution to be paired with PJM Proposal ID 2024-W1-200 ("Common Components").
Email	CONFIDENTIAL INFORMATION
Project in-service date	06/2029
Tie-line impact	Yes
Interregional project	No
Is the proposer offering a binding cap on capital costs?	Yes
Additional benefits	CONFIDENTIAL INFORMATION

Project Components

1. Rocky Ford 765/500 kV Substation
2. Stage 765/500 kV Substation
3. Marsh 500/230 kV Substation
4. Piney Mountain 500 kV Substation
5. Cunningham 500 kV Substation Expansion

6. Rocky Ford to Stage 500 kV Transmission Line
7. Stage to Piney Mountain 500 kV Transmission Line
8. Piney Mountain to Cunningham 500 kV Transmission Line
9. Piney Mountain to Marsh #1 500 kV Transmission Line
10. Piney Mountain to Marsh #2 500 kV Transmission Line
11. Marsh to Morrisville #1 Double Circuit 500/230 kV Transmission Line
12. Marsh to Vint Hill Double Circuit 230/230 kV Transmission Line
13. Axton to Jackson Ferry 765 kV Transmission Line Loop-In
14. Joshua Falls to Cloverdale 765 kV Transmission Line Loop-In
15. Marsh - Morrisville #2 Double Circuit 500/230 kV Circuit

Greenfield Substation Component

Component title	Rocky Ford 765/500 kV Substation
Project description	CONFIDENTIAL INFORMATION
Substation name	Rocky Ford
Substation description	The Rocky Ford Substation will consist of a 3-position double breaker 765kV yard with one of the positions for a 765/500 kV transformer.
Nominal voltage	AC
Nominal voltage	765/500

Transformer Information

	Name	Capacity (MVA)
Transformer	765/500 kV Rocky Ford Transformer	3125
	High Side	Low Side Tertiary
Voltage (kV)	765	500

Major equipment description	765 kV double breaker configuration with three (3) positions, six (6) circuit breakers, and a 765/500 kV transformer.	
	Normal ratings	Emergency ratings
Summer (MVA)	3125.000000	4000.000000
Winter (MVA)	3500.000000	4250.000000
Environmental assessment	<p>The Project will require a Certificate of Public Convenience and Necessity (“CPCN”) from the Virginia State Corporation Commission (“SCC”) (VA Code §§ 56-265.2, 56-46.1(B)). The proposed Project was sited to avoid and minimize impacts to areas of environmental concern, including wetlands and waters, based on GIS data. It is possible that the Project cannot avoid impacts to a limited number of wetlands and waterways, in which case impacts will be minimized to the extent practicable. Proposer will engage a qualified consultant to conduct a delineation of wetlands and waters in order to establish jurisdictional boundaries of aquatic resources in the Project area, the results of which will be used to refine Project siting, if necessary, and determine permitting requirements. The USACE will review the Project for compliance with Section 106 of the National Historic Preservation Act (16 USC §40 et seq.) and Section 7 of the Federal Endangered Species Act [16 USC §1536(a)(2)], in coordination with the Virginia State Historic Preservation Office and U.S. Fish and Wildlife Service, respectively. In addition to the permits described above, Proposer has identified other permits which may be required for the construction of the Project. Proposer considers these other permits to be minor due to the more limited effort to prepare applications and the less intensive application review processes which follow. These include permits related to Federal Aviation Administration airspace clearance and stormwater/erosion and sedimentation control (i.e., Pollutant Discharge Elimination System Construction General Permit). Post-award, Proposer will consult with local jurisdictions and state and federal permitting agencies to confirm permitting requirements, discuss the types and scopes of environmental surveys and studies required for permitting, and discuss appropriate avoidance/mitigation measures.</p>	
Outreach plan	<p>Proposer will identify and engage stakeholders, such as community officials and landowners within the Project area, early in the process and maintain an active dialogue throughout. Public meetings may be held to offer a venue for landowners and other interested community members to learn about the Project and for Proposer to learn more about specific landowner and community preferences. Proposer plans to make information available on its website and provide notification of public meetings to landowners within the Project area as required in the siting approval process.</p>	

Land acquisition plan	The Project will be located on new right-of-way to be purchased by Proposer. In addition, Proposer will procure any necessary easement required to access the site. Proposer will assign a Right-of-Way Manager to oversee all real estate related activities for the Project including appraisals, title work, surveying, land acquisition, and restoration. A right-of-way agent will contact the property owner(s) in person to explain the Project and, as necessary, secure permission to conduct surveys, archaeological studies, etc. The right-of-way agent will be the primary point of contact to negotiate with the property owner to acquire the substation site and any required easements on a mutually agreeable basis. To the extent that negotiations reach an impasse, Proposer will be able to pursue eminent domain. The right-of-way agents will continue to act as a liaison with the property owners during construction and through the restoration process.

Environmental assessment

The Project will require a Certificate of Public Convenience and Necessity (“CPCN”) from the Virginia State Corporation Commission (“SCC”) (VA Code §§ 56-265.2, 56-46.1(B)). The proposed Project was sited to avoid and minimize impacts to areas of environmental concern, including wetlands and waters, based on GIS data. It is possible that the Project cannot avoid impacts to a limited number of wetlands and waterways, in which case impacts will be minimized to the extent practicable. Proposer will engage a qualified consultant to conduct a delineation of wetlands and waters in order to establish jurisdictional boundaries of aquatic resources in the Project area, the results of which will be used to refine Project siting, if necessary, and determine permitting requirements. The USACE will review the Project for compliance with Section 106 of the National Historic Preservation Act (16 USC §40 et seq.) and Section 7 of the Federal Endangered Species Act [16 USC §1536(a)(2)], in coordination with the Virginia State Historic Preservation Office and U.S. Fish and Wildlife Service, respectively. In addition to the permits described above, Proposer has identified other permits which may be required for the construction of the Project. Proposer considers these other permits to be minor due to the more limited effort to prepare applications and the less intensive application review processes which follow. These include permits related to Federal Aviation Administration airspace clearance and stormwater/erosion and sedimentation control (i.e., Pollutant Discharge Elimination System Construction General Permit). Post-award, Proposer will consult with local jurisdictions and state and federal permitting agencies to confirm permitting requirements, discuss the types and scopes of environmental surveys and studies required for permitting, and discuss appropriate avoidance/mitigation measures.

Outreach plan

Proposer will identify and engage stakeholders, such as community officials and landowners within the Project area, early in the process and maintain an active dialogue throughout. Public meetings may be held to offer a venue for landowners and other interested community members to learn about the Project and for Proposer to learn more about specific landowner and community preferences. Proposer plans to make information available on its website and provide notification of public meetings to landowners within the Project area as required in the siting approval process.

Land acquisition plan

The Project will be located on new right-of-way to be purchased by Proposer. In addition, Proposer will procure any necessary easement required to access the site. Proposer will assign a Right-of-Way Manager to oversee all real estate related activities for the Project including appraisals, title work, surveying, land acquisition, and restoration. A right-of-way agent will contact the property owner(s) in person to explain the Project and, as necessary, secure permission to conduct surveys, archaeological studies, etc. The right-of-way agent will be the primary point of contact to negotiate with the property owner to acquire the substation site and any required easements on a mutually agreeable basis. To the extent that negotiations reach an impasse, Proposer will be able to pursue eminent domain. The right-of-way agents will continue to act as a liaison with the property owners during construction and through the restoration process.

Greenfield Transmission Line Component

Component title	Rocky Ford to Stage 500 kV Transmission Line	
Project description	CONFIDENTIAL INFORMATION	
Point A	Rocky Ford	
Point B	Stage	
Point C		
	Normal ratings	Emergency ratings
Summer (MVA)	4357.000000	4357.000000
Winter (MVA)	5155.000000	5155.000000
Conductor size and type	Triple Bundle 1272kcmil "Pheasant" ACSS/TW MA3	
Nominal voltage	AC	
Nominal voltage	500	
Line construction type	Overhead	
General route description	<p>The route heads generally north away from the new Rocky Ford Substation and traverses woodlands and some farmland for approximately 71 miles before terminating at the new Stage Substation. The route crosses eight (8) transmission lines and crosses the Roanoke River. There are no habitable structures within the right of way and route crosses 340 parcels. Based on desktop level data for mapped wetlands and floodplains, structures were sited such that there will be no permanent impact to these areas.</p>	
Terrain description	<p>The terrain for the route is largely characterized by rolling hills and numerous ridges lying between the mountain and coastal plain regions near the boundary with the Blue Ridge Mountains. The route traverses woodlands and some farmlands. Traditional methods of access and construction are feasible along the majority of the route. Alternative methods of access and construction will be considered as needed.</p>	
Right-of-way width by segment	The route is approximately 71 miles in length and the right-of-way width is planned to be 175 feet.	

Electrical transmission infrastructure crossings	Over Candler Mountain to Rustburg 138 kV, Over Chatham to Gretna 69/115 kV, Over Gretna to Gladys 69/115 kV, Over Grit to Otter River 115 kV, Over Mt Airy Tap to Mt Airy 69/115 kV, Over Smith Mountain to East Danville 138 kV, Under Joshua Falls to Cloverdale 765 KV, Under Joshua Falls to Cloverdale 765 KV
Civil infrastructure/major waterway facility crossing plan	The proposer will secure crossing and encroachment permits, authorizations and agreements for existing linear infrastructure crossed by the project. The proposer will coordinate with easement holders including; municipal and county roads; oil and gas pipelines; transmission lines, and local distribution utilities (power, sewer, water, gas, fiber, etc.) to not interfere with existing easement rights crossed by the project. The proposer will obtain occupation agreements from municipal and county jurisdictions to place transmission facilities over municipal and county roads. The proposer plans to secure crossing agreements with existing oil and gas pipelines and transmission lines.
Environmental impacts	The Project will require a Certificate of Public Convenience and Necessity (“CPCN”) from the Virginia State Corporation Commission (“SCC”) (VA Code §§ 56-265.2, 56-46.1(B)). The proposed Project was routed to avoid and minimize impacts to areas of environmental concern, including wetlands and waters, based on GIS data. Environmental impacts will be minimized by collocating the proposed transmission line along corridors of existing linear development to the maximum extent practicable. Proposer will engage a qualified consultant to conduct a delineation of wetlands and waters in order to establish jurisdictional boundaries of aquatic resources in the Project area, the results of which will be used to refine Project routing, if necessary, and determine permitting requirements. Any unavoidable, regulated impacts to regulated aquatic resources will be mitigated in accordance with applicable state and federal regulations. Further, aquatic resources that may be temporarily impacted during construction will be restored to pre-construction conditions in accordance with applicable state and federal permit conditions. It is possible that compensatory mitigation will be required to offset unavoidable permanent impacts to aquatic resources. The USACE will review the Project for compliance with Section 106 of the National Historic Preservation Act (16 USC §40 et seq.) and Section 7 of the Federal Endangered Species Act [16 USC §1536(a)(2)], in coordination with the Virginia State Historic Preservation Office and U.S. Fish and Wildlife Service, respectively. In addition to the permits described above, Proposer has identified other permits which may be required for the construction of the Project. Proposer considers these other permits to be minor due to the more limited effort to prepare applications and the less intensive application review processes which follow. These include permits related to Federal Aviation Administration airspace clearance, stormwater/erosion and sedimentation control (i.e., Pollutant Discharge Elimination System Construction General Permit), road crossings, and utility and railroad crossings. Post-award, Proposer will consult with local jurisdictions and state and federal permitting agencies to confirm permitting requirements, discuss the types and scopes of environmental surveys and studies required for permitting, and discuss appropriate avoidance/mitigation measures.
Tower characteristics	The towers will primarily consist of self-supported lattice towers with a single circuit delta configuration.

General route description

The route heads generally west away from the new Piney Mountain Substation and traverses woodlands and some farmland for approximately 3.4 miles before terminating at the existing Cunningham Substation. The route crosses two (2) transmission lines but does not cross any major waterways. There are no habitable structures within the right of way and route crosses 18 parcels. Based on desktop level data for mapped wetlands and floodplains, structures were sited such that there will be no permanent impact to these areas.

Terrain description

The terrain for the route is largely characterized by rolling hills and numerous ridges lying between the mountain and coastal plain regions near the boundary with the Blue Ridge Mountains. The route traverses woodlands and some farmlands. Traditional methods of access and construction are feasible along the majority of the route. Alternative methods of access and construction will be considered as needed.

Right-of-way width by segment

The new transmission line is approximately 3.4 miles in length and the right-of-way width is planned to be 175 feet.

Electrical transmission infrastructure crossings

Over Bremono Bluff to Cunningham DP 115 kV, Over Mount Eagle to Bremono Bluff 230 kV

Civil infrastructure/major waterway facility crossing plan

The proposer will secure crossing and encroachment permits, authorizations and agreements for existing linear infrastructure crossed by the project. The proposer will coordinate with easement holders including; municipal and county roads; oil and gas pipelines; transmission lines, and local distribution utilities (power, sewer, water, gas, fiber, etc.) to not interfere with existing easement rights crossed by the project. The proposer will obtain occupation agreements from municipal and county jurisdictions to place transmission facilities over municipal and county roads. The proposer plans to secure crossing agreements with existing oil and gas pipelines and transmission lines.

Environmental impacts	<p>The Project will require a Certificate of Public Convenience and Necessity (“CPCN”) from the Virginia State Corporation Commission (“SCC”) (VA Code §§ 56-265.2, 56-46.1(B)). The proposed Project was routed to avoid and minimize impacts to areas of environmental concern, including wetlands and waters, based on GIS data. Environmental impacts will be minimized by collocating the proposed transmission line along corridors of existing linear development to the maximum extent practicable. Proposer will engage a qualified consultant to conduct a delineation of wetlands and waters in order to establish jurisdictional boundaries of aquatic resources in the Project area, the results of which will be used to refine Project routing, if necessary, and determine permitting requirements. Any unavoidable, regulated impacts to regulated aquatic resources will be mitigated in accordance with applicable state and federal regulations. Further, aquatic resources that may be temporarily impacted during construction will be restored to pre-construction conditions in accordance with applicable state and federal permit conditions. It is possible that compensatory mitigation will be required to offset unavoidable permanent impacts to aquatic resources. The USACE will review the Project for compliance with Section 106 of the National Historic Preservation Act (16 USC §40 et seq.) and Section 7 of the Federal Endangered Species Act [16 USC §1536(a)(2)], in coordination with the Virginia State Historic Preservation Office and U.S. Fish and Wildlife Service, respectively. In addition to the permits described above, Proposer has identified other permits which may be required for the construction of the Project. Proposer considers these other permits to be minor due to the more limited effort to prepare applications and the less intensive application review processes which follow. These include permits related to Federal Aviation Administration airspace clearance, stormwater/erosion and sedimentation control (i.e., Pollutant Discharge Elimination System Construction General Permit), road crossings, and utility and railroad crossings. Post-award, Proposer will consult with local jurisdictions and state and federal permitting agencies to confirm permitting requirements, discuss the types and scopes of environmental surveys and studies required for permitting, and discuss appropriate avoidance/mitigation measures.</p>
Tower characteristics	<p>The towers will primarily consist of self-supported lattice towers with a single circuit delta configuration.</p>

Greenfield Transmission Line Component

Component title	Piney Mountain to Marsh #1 500 kV Transmission Line
Project description	CONFIDENTIAL INFORMATION
Point A	Piney Mountain
Point B	Marsh
Point C	

	Normal ratings	Emergency ratings
Summer (MVA)	4357.000000	5022.000000
Winter (MVA)	5155.000000	5802.000000
Conductor size and type	Triple Bundle 1272kcmil "Pheasant" ACSS/TW MA3	
Nominal voltage	AC	
Nominal voltage	500	
Line construction type	Overhead	

General route description

The route heads generally north away from the new Piney Mountain Substation and traverses woodlands and some farmland for approximately 65.6 miles before terminating at the new Marsh Substation. The route crosses five (5) transmission lines and crosses the Rapidan and Rappahannock rivers. There are no habitable structures within the right of way and route crosses 375 parcels. Based on desktop level data for mapped wetlands and floodplains, structures were sited such that there will be no permanent impact to these areas.

Terrain description

The terrain for the route is largely characterized by rolling hills and numerous ridges lying between the mountain and coastal plain regions near the boundary with the Blue Ridge Mountains. The route traverses woodlands and some farmlands. Traditional methods of access and construction are feasible along the majority of the route. In addition to the permits described above, Proposer has identified other permits which may be required for the construction of the Project. Proposer considers these other permits to be minor due to the more limited effort to prepare applications and the less intensive application review processes which follow. These include permits related to Federal Aviation Administration airspace clearance, stormwater/erosion and sedimentation control (i.e., Pollutant Discharge Elimination System Construction General Permit), road crossings, and utility and railroad crossings. Post-award, Proposer will consult with local jurisdictions and state and federal permitting agencies to confirm permitting requirements, discuss the types and scopes of environmental surveys and studies required for permitting, and discuss appropriate avoidance/mitigation measures.</p>
Tower characteristics	<p>The towers will primarily consist of self-supported lattice towers with a double circuit horizontal configuration.</p>

Financial Information

Capital spend start date 06/2025

Construction start date 06/2027

Project Duration (In Months) 48

Cost Containment Commitment

Cost cap (in current year) CONFIDENTIAL INFORMATION

Cost cap (in-service year)

CONFIDENTIAL INFORMATION

Components covered by cost containment

1. Rocky Ford 765/500 kV Substation - Proposer
2. Stage 765/500 kV Substation - Proposer
3. Marsh 500/230 kV Substation - Proposer
4. Piney Mountain 500 kV Substation - Proposer
5. Rocky Ford to Stage 500 kV Transmission Line - Proposer
6. Stage to Piney Mountain 500 kV Transmission Line - Proposer
7. Piney Mountain to Cunningham 500 kV Transmission Line - Proposer
8. Piney Mountain to Marsh #1 500 kV Transmission Line - Proposer
9. Piney Mountain to Marsh #2 500 kV Transmission Line - Proposer
10. Marsh to Morrisville #1 Double Circuit 500/230 kV Transmission Line - Proposer
11. Marsh to Vint Hill Double Circuit 230/230 kV Transmission Line - Proposer
12. Marsh - Morrisville #2 Double Circuit 500/230 kV Circuit - Proposer

Cost elements covered by cost containment

Engineering & design	Yes
Permitting / routing / siting	Yes
ROW / land acquisition	Yes
Materials & equipment	Yes
Construction & commissioning	Yes
Construction management	Yes
Overheads & miscellaneous costs	Yes
Taxes	Yes
AFUDC	No

Escalation

No

Additional Information

CONFIDENTIAL INFORMATION

Is the proposer offering a binding cap on ROE?

Yes

Would this ROE cap apply to the determination of AFUDC?

Yes

Would the proposer seek to increase the proposed ROE if FERC finds that a higher ROE would not be unreasonable?

No

Is the proposer offering a Debt to Equity Ratio cap?

CONFIDENTIAL INFORMATION

Additional cost containment measures not covered above
